

Michel Beaubien
Responsive app

Hello Sir

It's cross browser ready, it's responsive and looking good. I've extended the Live search project. A couple movie have been added to it.

The required part for this project is in the select option dropdown, but also at the bottom of that page there are buttons in which to click and change info.

ONE thing does not work on firefox, the top left movie picker. This is due to e.preventDefault problem being viewed by Firefox, but fine in chrome. looking into it.

For what it's worth, this project is live and localhost ready.

Thank you!
